

EQUINE *Motorcoach*TM

The New Breed of Luxury

Combining the comfort and amenities of a luxury RV with accommodations for horse transportation.

Made in the United States

Equine Motorcoach™ is the one of a kind all-in-one RV and horse transport. It features two, four and six-horse configurations with fully loaded amenities on the interior and exterior. The interior has a 12' slide out with dinette and sofa, spacious full bath, complete kitchen and multiple sleeping accommodations. The horse transport area has air ride suspension and European slant load configuration to provide our horses the best possible ride.

Equine Motorcoach™ brand has achieved so much name recognition in North America that the partners in Equine Motorcoach LLC moved manufacturing to the U.S. in 2012 after building a relationship with Renegade Custom Coaches that included extensive engineering and design upgrades.

The first 2012 Equine Motorcoach™ is built on a 560 hp Freightliner, Cascadia chassis with an Allison 4000 TRV automatic transmission. Equine Motorcoach will build on other brand chassis upon request.

RV Benefits and Features

Freightliner Chassis

- Largest manufacturer in the trucking industry
- Nation wide dealer network
- Variety of chassis choices
- Variety of engine and transmission combinations
- Designed to go a million miles

FRP Construction

- Smooth seam free exterior
- Low maintenance
- Industrial strength
- 100% walk on roof
- Paintable and repairable

Onan Generators

- Name brand recognition
- Variety of sizes to fit any application
- Nation wide service
- Quiet operation
- Slide out for easy maintenance

Steel Storage Boxes

- Powder coated for lasting durability
- Larger load capacity
- Lighted for ease of packing
- Felt lined for cargo protection
- Soft rubber door seal for cargo protection

Super Sandwich Coach Floor

- Strong 3X6 steel frame runners
- Strong 2X2 steel cross members
- Galvanized steel vapor barrier
- Bead board and fiberglass insulation in floor
- Strong 3/4 " plywood sub floor

Sony Electronics

- Full product line
- Name brand recognition
- Component compatibility
- Nationwide service
- Matching appearance

Central Monitor Panel

- Convenient location
- Shows tank levels
- Control water heater
- Control generator
- Operate slide-outs

Available Slide-outs

- Increased living space
- Flush floor when extended
- Push button operation
- Rack and pinion/gear drive
- Standard awning for protection

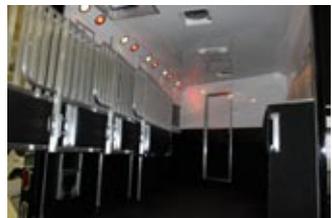

Flexsteel Seating

- Brand recognition
- Engineered frames
- Multi-functional controls
- Engineered seat foam
- Modern styling

Common RV Utilities

- Suburban water heaters (nationwide service)
- Suburban furnaces (nationwide service)
- Dometic Refrigerators (nationwide service)
- Shur-flow water pumps and vents (nationwide service)

EQUINE *Motorcoach*TM

Horse Transport Interior Features and Benefits

The horse trailer interior fits a vast majority of horse breeds. Drop down windows provide maximum ventilation and all slant load interiors feature 32" x 26" extruded aluminum drop down feed doors with center latches and independent face guards.

Large sliding glass windows behind each horse stall provide plenty of light and ventilation.

Construction

The interior horse transport area is bright, open and insulated. Closed cell foam insulation in the stall walls and ceiling keep horses cooler in the summer and warmer in the winter. Stalls are covered with a white baked enamel interior liner that covers the full height of the walls. Using an aluminum interior liner provides maximum corrosion protection and makes the stall area smoother, quieter, easier to clean, and safer for horses.

To provide maximum equine protection and to keep the horse transport interior looking sharp, the stall walls are lined with rubber up to 48". Thick molded rubber mats provide extra comfort for horses and are easily removable to facilitate interior cleaning.

Safety

The horse interior comes standard with the maximum combination of protection and control for horses and their handlers. Use of heavy-duty padding and slam latches are on all dividers in slant load interiors.

All dividers are made from tubular aluminum, which is lighter in weight and cannot rust.

Open grillwork on head and shoulder dividers makes interiors appear more spacious and increases ventilation for horses.

Versatility

The horse transport interior should be as useful as possible: therefore, the interiors feature removable dividers.

Side mangers are constructed from heavy-duty aluminum sheets, feature a drain, and storage below the manger tray. Access below the manger tray is provided through large extruded aluminum outside baggage doors for greater storage and versatility.
